EDUCATION

San Jacinto College

Aug 2020 – May 2024

Associate's in General Study — GPA: 3.73

EXPERIENCE

Barista

Jul 2025 – Present

Starbucks

Baytown, TX

- Managed and maintained complex Point-of-Sale (POS) systems and automated brewing hardware, performing real-time troubleshooting to prevent system downtime during peak high-traffic intervals. Streamlined "beverage sequencing" protocols—similar to asynchronous task management—to handle multiple concurrent requests, improving order throughput and reducing latency in customer delivery.
- Translated ambiguous user "customization" requests into precise technical specifications (beverage builds), ensuring high-fidelity output and maintaining accuracy in a fast-paced, "Sprint"-like environment.

PROJECTS

WeatherView Dashboard | *HTML5, CSS3, JavaScript, REST API*

- Developed a responsive weather application using the OpenWeatherMap API to provide real-time meteorological data for global cities.
- Implemented Asynchronous JavaScript (Promises/Async-Await) to handle API requests and manage edge-case error handling for invalid user inputs.
- Utilized Browser LocalStorage to persist user search history, improving UX by reducing redundant API calls on page reload.
- Designed a modern "Glassmorphism" UI using CSS Flexbox and Grid, ensuring 100 percent mobile responsiveness.

Automated Web Intelligence Scraper | *Python, BeautifulSoup, GitHub Actions*

- Developed a Python-based data pipeline to extract real-time tech headlines and metadata from web sources.
- Automated daily data collection by configuring a GitHub Actions CI/CD pipeline, utilizing YAML to schedule script execution and manage automated cloud environments.
- Engineered a data persistence system that logs results into structured CSV files, ensuring 100 percent data integrity through automated Git commits.
- Implemented error handling and custom headers to ensure reliable connection to external servers and handle network timeouts.

GitHub Automation Bot | *GitHub Actions, YAML, Git*

- Architected a scheduled automation service using GitHub Actions to maintain repository activity and test CI/CD pipeline reliability.
- Engineered a headless workflow that executes on a custom Cron schedule, performing automated file updates and version control commits.
- Configured secure repository permissions and optimized YAML configurations to ensure 100 percent success rate for automated tasks.

EXPERIENCE

Event Coordinator

May 2025 – Dec 2025

Cougarettes

Houston, TX

- Brainstormed event concepts and objectives, and developed comprehensive plans and timelines for computer science workshops and interactive social events
- Researched and booked on-campus and off-campus venues and coordinated with vendors for catering, audio-visual equipment, and other services
- Oversaw day-of logistics, including setup and breakdown, and acted as the primary point of contact for guests, speakers, vendors, and volunteers, quickly resolving any issues that arose

TECHNICAL SKILLS

Languages: Python (BeautifulSoup), JavaScript (ES6+), HTML5, CSS3

Tools DevOps: Git, GitHub, GitHub Actions (CI/CD), YAML, Cron Job Scheduling

Web Technologies: REST APIs (OpenWeatherMap), Web Storage API (LocalStorage), JSON, Fetch API

Data Analytics: Web Scraping, Data Visualization (Chart.js), Data Persistence (CSV/Structured Logs)
